

Correct handling of PVC cards

Guidance for application purposes, safety & durability

Information sheet

As an independent full-service provider with our own ultra-modern PVD card production, we guarantee maximum quality in all production processes as well as the use of the highest quality materials and semifinished products.

Multi-layer cards with the suitable technology, e.g. RFID or contact chip from MADA, have a durability of several years if handled correctly, carefully and above all, appropriately and can withstand highest temperature and environmental requirements depending on type and version.

However, in order to guarantee a long-term print image and technical functionality, the awareness of a correct handling of the cards during their everyday use is needed. The following tips can help you to maximize the card durability and to protect your cards visually and technically.

Never use a plastic card for anything else than its intended purpose.

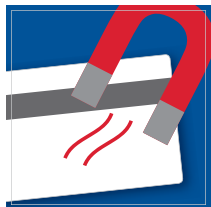

Protect your card with a suitable dispenser or card holder!

Do not bend, twist or fold your cards!

Never punch cards yourself – use our service!

Keep the magnetic stripe away from magnetic radiation!

Do not try to open doors mechanically with plastic cards!

Avoid direct sunlight and higher temperatures (more than 50 °C)!

Do not use a plastic card as an ice scraper or bottle opener!

Never carry plastic cards unprotected in wallets or separately in trouser pockets!

Do not place plastic cards openly and unprotected behind the windshield!
