

Skin compatibility watchstrap transponder

Declaration / Statement

Information sheet

Our watchstrap transponders **classic** and **comfort** are worn directly on the skin and are made of ABS plastic (housing), TUP plastic (wristband comfort), perlon/nylon (wristband classic) and stainless steel (closure). The materials used do not contain dangerous substances in accordance with REACH regulation (EC) no. 1907/2006 and are generally skin-friendly.

Those materials are used in a wide range of applications, including medical devices, household articles, electrical devices, sports equipment, shoes, clothing, jewelry & other products. In general, they are considered safe for skin contact, provided that they are properly processed and manufactured.

It is important to point out, that individual reactions to materials can vary. People have different skin types and sensibilities. Therefore, some people may react more sensitive to certain materials than others. The used disinfectants, cleaning agents, care products and water additives can also have a negative influence. Contact dermatitis and other skin reactions may occur in some rare cases, even if the materials are generally considered safe.

It is recommendable to pay attention to potential skin reactions, especially in case of extended or repeated contact with the watchstrap transponders. In case of skin irritations, redness or other unusual reaction, please remove the wristband and contact a dermatologist if necessary.

The fact that the used materials are classified safe and skin-friendly according to the guidelines, constitutes a good basis for the use of the watchstrap transponders. Nevertheless, it is important to pay attention to the individual requirements and reactions of each person.
