smartMX card from MADA

The combination of physical and logical access control

Product information

MADA combines the requirements of a physical access with the digital/logical access with the new **smartMX card**.

The physical access control limits, regulates and tracks, which persons have access to which physical room. The primarily used technologies of MIFARE DESFire & LEGIC advant are entirely supported.

FIDO2 allows the strong multi-factor authentication without password at web services and operating systems.
